IN THE CLAIMS:

1.-20. (Cancel)

21. An inhaler device (2) comprising first and second components (4,6) movable relative to one another; means for receiving a medicament cartridge (12) comprising a plurality of compartments (140) containing medicament; medicament extraction facilitating means (14) for locating adjacent a compartment (140) of a received cartridge (12) and thereby allowing an extraction of medicament therefrom; and operating means (16, 28, 34, 40, 42, 44, 46) which, when activated by a user, advances a cartridge compartment (140) of a received cartridge (12) into a predetermined position relative to the medicament extraction facilitating means (14) and extends the medicament extraction facilitating means (14) into a position adjacent said advanced compartment (140) for allowing medicament extraction upon inhalation by a user; wherein the operating means is mounted relative to said first and second components (4, 6) so as to be activated in response to said first and second components (4, 6) being moved relative to one another by a user, and wherein the operating means comprises biasing means (16) for applying a force to a received cartridge (12) which, on activation of the operating means, advances said compartment (140) towards said predetermined position; the inhaler device (2) being characterised in that the cartridge receiving means and the cartridge biasing means (16) are secured to said

first component (4), and in that the operating means further comprises

two pins (34) which are each further secured to said first component (4)

so as each to be movable between an extended position, in which the

respective pin is engageable with a received cartridge (12) so as to limit

the cartridge advancement caused by said biasing force, and a retracted

position, in which the respective pin is spaced from a received cartridge

(12) so as to not limit cartridge advancement.

22. (New) An inhaler device (2) as claimed in claim 21, wherein the

operating means comprises biasing means (16) for applying a force to a

received cartridge (12) which, on activation of the operating means,

advances said compartment (140) towards said predetermined position.

23. (New) An inhaler device (2) as claimed in claim 22, wherein the

cartridge receiving means and the cartridge biasing means (16) are

secured to said first component (4), and wherein the operating means

further comprises two pins (34) which are each further secured to said

first component (4) so as each to be movable between an extended

position, in which the respective pin is engageable with a received

cartridge (12) so as to limit the cartridge advancement caused by said

biasing force, and a retracted position, in which the respective pin is

spaced from a received cartridge (12) so as to not limit cartridge

advancement.

24. (New) An inhaler device (2) as claimed in claim 23, wherein the

operating means further comprises two camming members (44, 46)

secured to said second component (6) which are each arranged so as to

move a different one of the two pins (34) in response to said first and

second components (4, 6) being moved relative to one another by a user.

25. (New) An inhaler device (2) as claimed in claim 24, wherein said

two pin camming members (44, 46) are arranged so as to ensure at least

one pine is located in the extended position regardless of the position of

said first component relative to said second component.

26. (New) An inhaler device (2) as claimed in claim 25, wherein a

space is provided between a medicament cartridge (12) and a pin (34)

moved from a retracted position into engagement therewith, the space

being such that, when a first pin (34) moves from an extended position

into a retracted position, the space between the cartridge (12) and a

second pin (34) engaged therewith is closed as the cartridge (12)

advances under the bias of the biasing means (16).

27. (New) An inhaler device (2) as claimed in claim 21, wherein the

operating means retracts the medicament extraction facilitating means

from adjacent said advanced compartment (140) when further activated

by a user, wherein the operating means is mounted relative to said first

and second components (4, 6) so as to be further activated in response to

Doc. #66455-265-7 PCT/GB2004/002982

Preliminary Amdt dated Jan. 9, 2006

said first and second components being moved relative to one another by

a user.

28. (New) An inhaler device (2) as claimed in claim 21, wherein the

medicament extraction facilitating means (14) is secured to said first

component (4) so as to be movable between an extended position, in

which the extraction facilitating means (14) is located adjacent a cartridge

compartment (140) for allowing medicament extraction therefrom, and a

retracted position, in which the extraction facilitating means (14) is

spaced from said cartridge compartment (140) so as to not limit cartridge

advancement; and the operating means comprises camming means (40,

42) secured to said second component (6) which is arranged so as to

move the extraction facilitating means (14) in response to said first and

second components (4, 6) being moved relative to one another by a user.

29. (New) An inhaler device (2) as claimed in claim 28, wherein said

camming means (40, 42) comprises two separate camming members (40,

42), a first (40) of which moves the extraction facilitating means (14)

towards the extended position and a second (42) of which moves the

extraction facilitating means (14) towards the retracted position.

30. (New) An inhaler device (2) as claimed in claim 29, wherein the

operating means comprises a lever (28) pivotally secured to said first

component (4) and connecting the extraction facilitating means (14) to

one of said two separate caroming members (40, 42).

31. (New) An inhaler device (2) as claimed in claim 21, further

comprising counting means (148, 150) for indicating to a user the number

of compartments (140) remaining to be advanced.

32. (New) An inhaler device (2) as claimed in claim 31, wherein the

counting means comprises a member provided with indicia and means for

moving said member across a window when a compartment (140) is

advanced.

33. (New) An inhaler device (2) as claimed in claim 21, further

comprising a mouthpiece (8) secured to one of said components (4, 6)

and in fluid communication with the medicament extraction facilitating

means (14), and a mouthpiece cover (10) secured to the other of said

components (4, 6).

34. (New) An inhaler device (2) as claimed in claim 21, comprising a

mouthpiece (8) and a mouthpiece cover for covering the mouthpiece.

35. (New) An inhaler device (2) as claimed in claim 34, wherein the

mouthpiece cover is fixed to the mouthpiece so as to allow relative

rotational movement of the mouthpiece and mouthpiece cover between a

first configuration, in which the mouthpiece is covered, and a second

configuration, in which the mouthpiece is uncovered.

36. (New) An inhaler device (2) as claimed in claim 21, wherein the

extraction facilitating means (14) comprises a fluid passage defining a

venturi.

37. (New) An inhaler device (2) as claimed in claim 21, wherein the

extraction facilitating means (14) comprises means for piercing a

compartment (140).

38. (New) An inhaler device (2) as claimed in claim 21, wherein means

are provided for preventing advancement of the cartridge (12) once the

medicament extraction facilitating means (14) has been located adjacent

each compartment (140) of the cartridge (12).

39. (New) An inhaler device (2) as claimed in claim 21, wherein a stop

member is provided on the cartridge which, when engaged with a stop

member provided on one of said first and second components, prevents

movement of the cartridge (12) further than the last dose.

40. (New) An inhaler device (2) comprising first and second

components (4, 6) movable relative to one another; means for receiving a

medicament cartridge (12) comprising a plurality of compartments (140)

containing medicament; medicament extraction facilitating means (14) for

locating adjacent at compartment (140) of a received cartridge (12) and

thereby allowing an extraction of medicament therefrom; and operating

means (16, 28, 34, 40, 42, 44, 46) which, when activated by a user,

advances a cartridge compartment (140) of a received cartridge (12) into

Doc. #66455-265-7 PCT/GB2004/002982

Preliminary Amdt dated Jan. 9, 2006

a predetermined position relative to the medicament extraction facilitating

means (14) and extends the medicament extraction facilitating means

(14) into a position adjacent said advanced compartment (140) for

allowing medicament extraction upon inhalation by a user; wherein the

operating means is mounted relative to said first and second components

(4, 6) so as to be activated in response to said first and second

components (4, 6) being moved relative to one another by a user.

(New) An inhaler device (2) as claimed in claim 40, wherein the 41.

operating means comprises biasing means (16) for applying a force to a

received cartridge (12) which, on activation of the operating means,

advances said compartment (140) towards said predetermined position.

(New) An inhaler device (2) as claimed in claim 41, wherein the 42.

cartridge receiving means and the cartridge biasing means (16) are

secured to said first component (4), and wherein the operating means

further comprises two pins (34) which are each further secured to said

first component (4) so as each to be movable between an extended

position, in which the respective pin is engageable with a received

cartridge (12) so as to limit the cartridge advancement caused by said

biasing force, and a retracted position, in which the respective pin is

spaced from a received cartridge (12) so as to not limit cartridge

advancement.

43. (New) An inhaler device (2) as claimed in claim 42, wherein the

operating means further comprises two camming members (44, 46)

secured to said second component (6) which are each arranged so as to

move a different one of the two pins (34) in response to said first and

second components (4, 6) being moved relative to one another by a user.

44. (New) An inhaler device (2) as claimed in claim 43, wherein said

two pin camming members (44, 46) are arranged so as to ensure at least

one pine is located in the extended position regardless of the position of

said first component relative to said second component.

45. (New) An inhaler device (2) as claimed in claim 44, wherein a

space is provided between a medicament cartridge (12) and a pin (34)

moved from a retracted position into engagement therewith, the space

being such that, when a first pin (34) moves from an extended position

into a retracted position, the space between the cartridge (12) and a

second pin (34) engaged therewith is closed as the cartridge (12)

advances under the bias of the biasing means (16).

46. (New) An inhaler device (2) as claimed in claim 40, wherein the

operating means retracts the medicament extraction facilitating means

from adjacent said advanced compartment (140) when further activated

by a user, wherein the operating means is mounted relative to said first

and second components (4, 6) so as to be further activated in response to

said first and second components being moved relative to one another by

a user.

(New) An inhaler device (2) as claimed in claim 40, wherein the 47.

medicament extraction facilitating means (14) is secured to said first

component (4) so as to be movable between an extended position, in

which the extraction facilitating means (14) is located adjacent a cartridge

compartment (140) for allowing medicament extraction therefrom, and a

retracted position, in which the extraction facilitating means (14) is

spaced from said cartridge compartment (140) so as to not limit cartridge

advancement; and the operating means comprises camming means (40,

42) secured to said second component (6) which is arranged so as to

move the extraction facilitating means (14) in response to said first and

second components (4, 6) being moved relative to one another by a user.

(New) An inhaler device (2) as claimed in claim 47, wherein said 48.

camming means (40, 42) comprises two separate camming members (40,

42), a first (40) of which moves the extraction facilitating means (14)

towards the extended position and a second (42) of which moves the

extraction facilitating means (14) towards the retracted position.

(New) An inhaler device (2) as claimed in claim 48, wherein the 49.

operating means comprises a lever (28) pivotally secured to said first

component (4) and connecting the extraction facilitating means (14) to

one of said two separate caroming members (40, 42).

comprising counting means (148, 150) for indicating to a user the number

An inhaler device (2) as claimed in claim 40, further

of compartments (140) remaining to be advanced.

51. (New) An inhaler device (2) as claimed in claim 50, wherein the

counting means comprises a member provided with indicia and means for

moving said member across a window when a compartment (140) is

advanced.

50.

(New)

52. (New) An inhaler device (2) as claimed in claim 40, further

comprising a mouthpiece (8) secured to one of said components (4, 6)

and in fluid communication with the medicament extraction facilitating

means (14), and a mouthpiece cover (10) secured to the other of said

components (4, 6).

53. (New) An inhaler device (2) as claimed in claim 40, comprising a

mouthpiece (8) and a mouthpiece cover for covering the mouthpiece.

54. (New) An inhaler device (2) as claimed in claim 53, wherein the

mouthpiece cover is fixed to the mouthpiece so as to allow relative

rotational movement of the mouthpiece and mouthpiece cover between a

first configuration, in which the mouthpiece is covered, and a second

configuration, in which the mouthpiece is uncovered.

Doc. #66455-265-7 PCT/GB2004/002982

Preliminary Amdt dated Jan. 9, 2006

55. (New) An inhaler device (2) as claimed in claim 40, wherein the

extraction facilitating means (14) comprises a fluid passage defining a

venturi.

56. (New) An inhaler device (2) as claimed in claim 40, wherein the

extraction facilitating means (14) comprises means for piercing a

compartment (140).

57. (New) An inhaler device (2) as claimed in claim 40, wherein means

are provided for preventing advancement of the cartridge (12) once the

medicament extraction facilitating means (14) has been located adjacent

each compartment (140) of the cartridge (12).

58. (New) An inhaler device (2) as claimed in claim 40, wherein a stop

member is provided on the cartridge which, when engaged with a stop

member provided on one of said first and second components, prevents

movement of the cartridge (12) further than the last dose.
